Narrative bio-sketch:

Stefano Zapperi is currently professor of theoretical condensed matter physics at the University of Milano and coordinator of the Center for Complexity and Biosystems. He graduated in physics at the University of Rome "La Sapienza" and received his Ph. D. in physics from Boston University. After a postdoctoral position at ESPCI in Paris, he became tenured researcher at INFM at the University Rome and then at the University Modena and Reggio Emilia. He became then senior researcher at CNR-IENI in Milano. He has been invited as visiting scientist or visiting professor in many institutions worldwide, including LMU Munich, FAU Erlangen-Nuremberg, Cornell University, Aalto University, ENS, Boston College, Rice University and the Weizmann Institute of Science. Prof. Zapperi is an expert in the statistical physics of complex systems and has fostered computational and data driven approaches to materials science and biophysics. His most notable contributions include the theory of the Barkhausen noise in magnets, the statistical physics of plasticity and fracture, and recent work on the physics of cancer and protein aggregation. He published more than 200 scientific papers in the top scientific journals, including 4 in Nature, 3 in Science, 4 in PNAS and 32 in Phys. Rev. Lett. gathering more than 10000 citations (scholar with H=51). In 2017, he co-authored with Caterina La Porta a book on the Physics of Cancer. Prof. Zapperi is the recipient of numerous awards including the Marie Curie Excellence Award, the Humboldt Research Award and an Advanced Grant from the European Research Council. He was elected fellow of the American Physical Society and named Finland Distinguished Professor by the Academy of Finland. He is member of the editorial boards of JSTAT and Physical Biology. He organized several international workshops, summer schools and symposia on a variety of interdisciplinary research topics, ranging from the "Physics of Cancer" to Statistical Physics of Materials and Complex Systems. He has been elected member of the council and the executive committee of the Complex Systems Society and acted as chair of the steering committee of the Conference on Complex Systems. In the area of technology transfer, he received a Proof of concept grant from the European Research Council on the automatic design of metamaterials and he recently co-founded the spinoff company Complexdata.

Publications on the Italian research system and outreach activities:

I have contributed to the debate on the Italian research and university system with a series of publications in newspaper and magazines and with a book (F. Sylos Labini, S. Zapperi "I ricercatori non crescono sugli alberi", Laterza 2011). I routinely participate in outreach activities to disseminate science and research problems to the public at large. Examples include participation to the Genova Science Festival (in 2005), participation to European Researchers Night (in 2010 and 2011) and contributions to online science magazines (scienzainrete).
